SEA, AIR & LAND (AND BEYOND) A TRIP IN TECHNOLOGY

Institution of
**MECHANICAL
ENGINEERS**

The *Museo Nazionale Scienza e Tecnologia "Leonardo da Vinci"* is the largest museum of science and technology in Italy, and one of the most important in Europe and in the world.

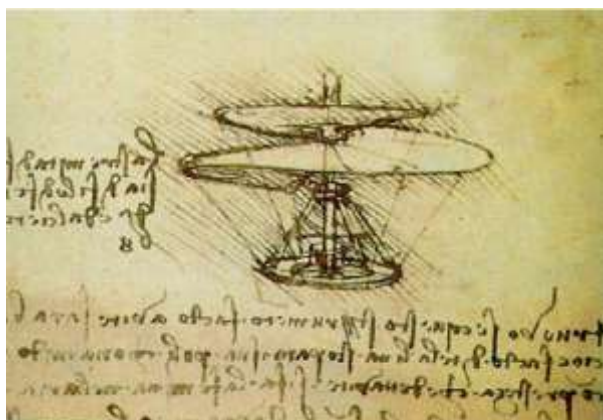

Alongside Leonardo's works, the Museum offers a vast panorama of vehicles and machines that have characterised human history. Of particular interest is the opportunity to visit a real submarine, the *Toti*, or try a real flight simulator! There is also no lack of rooms and exhibitions for those who are fond of space and extreme physics, without forgetting the good old mechanical engineering.

March 25th, 9:30

Museo Nazionale Scienza e Tecnologia
via San Vittore 21
Milan
