BIOMEDICAL DESIGN

**AN INSIGHT INTO THE DESIGN
OF PERSONALISED MEDICAL
IMPLANT DEVICES**

Institution of
**MECHANICAL
ENGINEERS**

For over 15 years, Dr Eggbeer has developed an extensive portfolio of research outputs, design engineering projects, workshops and commercial services.

Dr Eggbeer's research focuses on the design and development of personalised medical devices such as surgical implants, facial prosthetics, dental devices and other rehabilitation products. He works across medical, design and engineering disciplines to understand what people want from products and develop solutions that help to improve the way healthcare is delivered. In parallel to research, Dr Eggbeer has built, and currently manages a small, ISO 13485 compliant commercial team with broad ranging customers in UK hospitals, research groups and industry. This service has delivered thousands of anatomical models, patient specific implants and other devices to the UK NHS and beyond.

21st March 2019 - 19:00hrs

Refreshments served from 18:30hrs

Arup
4 Pierhead Street
Cardiff
CF10 4QP
