The Marenco Swisshelicopter Company was founded in 2007 to develop a new concept of light turbine helicopter, designed here in Switzerland. The result, the SKYe SH09, has a fully composite fuselage and a bearing-free 5-blade rotor.

Join the IMechE's Switzerland Group at Mollis airfield to discover how work is progressing on this state-of-the art helicopter, including viewing of the SKYe SH09 mock-up, prototype and testing area.
